

derbymed<sup>®</sup> :

... for power, endurance, healthiness  
and performance!

	Product	Indication	Application	Form	Presentation
	<b>Myocrescat</b> For the development of a capable musculature. Concentrate of amino acids with 40 % spirulina-based protein plus vitamin E and L-carnitine.				Macro-Granulate, 1,300 g Tub + dosing spoon
	<b>Orysanol E</b> Optimal stimulation of muscle metabolism. High concentrations of gamma-oryzanol (10 %) and vitamin E (11,5 %) boost the muscle development and preservation.				1,000 ml „Two-Neck-Dosing“ bottle + mouth syringe
	<b>TocoPlex</b> For a quick regeneration of the musculature and improved performance. Rich in natural antioxidants, L-carnitine and high concentration of vitamin E (150,000 mg).				1,000 ml „Two-Neck-Dosing“ bottle + mouth syringe
	<b>Mobility HCC</b> To support the joint function. It encourages the development of cartilage and joints persistence to enhance optimal flexibility and regeneration. The contained hyaluronic acid-chondroitin sulfate complex (25,000 mg/l) has optimal bioavailability.				2 x 500 ml glass bottle + dosing cap
	<b>Relax AC</b> Modulating effect of the psychological stress due to the contained Arglasol®-Complex. Calming effect begins 1–2 hours after application and will last 4–5 hours.	—			125 ml or 500 ml glass bottle + dosing cap

A healthy musculoskeletal system is essential for the wellbeing and general condition of a horse, its performance and consequently for its success in competition. There are a lot of affecting factors on the performance and motivation of a horse. Besides a professional training the optimal feeding is important for the development of the muscular system. Hereby joints, cartilage, tendons and ligaments play the essential role in the musculoskeletal system of the horse. This system gets strained intensely by daily training or participation in competitions. Aware of that the **derbymed** range contains several possibilities to support the horse's flexibility, performance and healthiness – in both prevention and therapy.

The product line for *high performance*  
and *healthiness* of your horse

derbymed<sup>®</sup>

## MUSCLE DEVELOPMENT

To be able to bring performance, horses need a well developed musculature. Depending on the predisposition approx. 40 % of the body weight is composed of musculature. A horse needs the essential amino acids as component of protein to optimal nourish the muscles and encourage their development. L-canitine is an additive that is important for the maintenance of the muscle-function. It optimizes the energy supply of the muscle cells and increases the maximum oxygen intake of the working musculature.

**Myocrescat** provides 18 essential amino acids to the horses and encourages so on the developement of a long-term capable and persistent musculature.

**Orysanol E** combines the developing function of gamma-oryzanol with the protecting function of vitamin E. Gamma-oryzanol is an extract of rice bran oil and is part of a group of naturally occurring steroids that efectively stimulate the muscle metabolism and development.

Myocrescat and Orysanol E build up the ideal combination to force the muscle growth!

*»The use of derbymed Myocrescat has proven of value not only for the older sport horses but for my younger jumpers as well. I can effectively support the muscle growth and ideal prepare the horses for their upcoming duties.«*

*Thomas Weinberg – Internat. rider + trainer*

### Myocrescat

- Concentrate of amino acids for a long-term support of muscle growth
- Acts as “nutrition of musculature”
- Ideal for younger or growing horses

## MUSCLE REGENERATION

In periods of intense physiological strain the horse’s muscle cells have an increased demand of oxygen. This causes a heightened production of free radicals that provoke a hyperacidity of the musculature and so on muscle soreness.

**TocoPlex** improves the oxygen supply of the musculature, protects the muscle cells due to the neutralisation of free radicals and causes consequently a quick muscle regeneration and optimised cell protection.

*»During periods of intensive training or competitions I use derbymed TocoPlex for my horses. It brings a quick regeneration for the musculature and the horses stay in high performance.«*

*Charlott Maria Schürmann – Member of the German squad in Dressage*

### TocoPlex

- To improve the oxygen supply of the musculature
- To protect the muscle cells from exhaustion, tying up or muscle soreness
- Quick muscle regeneration

## JOINT REGENERATION

Together with the musculature, the joints play an important role in the ability and strenght of the horse. Most of the joint problems are caused by detrition of the cartilage and an insufficient greasing of the joint mechanism. **Mobility HCC** contains a complex of hyaluronic acid and chondroitin sulfate to support greasing the joints and aids to regenerate the cartilage. Consequently it maintains systematically and long-term all joints in the horse’s body without any necessary injection.

*»To ensure the high performance of my horses even in case of high physiological strain I use derbymed Mobility for my horses. Due to this product all joints get the necessary support.«*

*Mario Stevens – Nations Cup rider and member of the German championship squad in Jumping*

### Mobility HCC

- To support and regenerate the joint function
- To improve flexibility
- To encourage performance
- To be used in therapy as well as prophylactical in periods of intense physiological strain

## PSYCHOLOGICAL STRESS

Even sport horses undergo several situations that may cause psychological stress that consequently have a negative impact on their concentration and performance. To relieve the horse **derbymed** developed **Relax AC**, a calming supplement to compensate excessive psychological stress reactions.

*»To enhance the concentration of my spirited horses in the show ring I use derbymed Relax AC.«*

*Eva Bitter – German Champion and member of the German squad in Jumping*

### Relax AC

- Calming effect in situations of psychological stress
- Helping to reduce fear reactions
- To achieve improved quality of riding and concentration
